Links background go grey on hover, white when active. Flex so resizes with browser window. Width 90%. margin of 5% on the left and right side. Border 1% rounded

Design

Rounded corners on each section featuring information to make website look less formal and more inviting to users instead of having flat pointy edges, banner at the top of the page so users know what website they are on, nav bar below the banner for easy and quick access to navigation. Font size for information and main text will be 1em as any smaller it will cause issues for those with sight impairments and any larger it will make the content seem fluffed up due to the increased text size.

Headings of sections will be 1.1em bold and underlined so it is clear that it is the heading and not part of the text in the article. Decided on font family of arial, verdana and calibri to ensure that text is easy to read and also if users are using certain browsers that there are multiple fonts available if the browser is unable to use any of the fonts specified. Font colour will be black so that it is easy to read on the background as any lighter colours may be difficult to be read.

I have decided to use 90% width throughout each section of the document to ensure that the content spans across the majority of the page with minimal white space and a height of 20% excluding the nav bar and banner which will both be 10%.

I will float the relevant images to the right of the articles they will be contained in and they will have a solid black border of 0.1em and will each have a height of 5% and a width of 20% so that they do not overpower the webpage and make the content look lacklustre.

Accessibility

To ensure that the website is accessible I have used a quite neutral colour scheme to ensure users who may have colour blindness could use the website with ease, each image will also have an alt attribute to ensure that those users who are using screen readers will be able to know what the image is.
